In 2018, opioid withdrawal should be considered a buprenorphine deficiency. Otherwise, a multitude of comparatively ineffective treatments can be combined/used in high enough doses to get your patient through. But much better: use the occasion of withdrawal to initiate bup.

**opioid withdrawal:
non-opioid treatments**

dysautonomia: clonidine
(dexmedetomidine, lofexidine)

pain: NSAIDs, acetaminophen, gabapentin, baclofen, tizanidine

GI distress: ondansetron, phenothiazines, antihistamines, loperamide, dicyclomine, octreotide

agitation: benzodiazepines, antipsychotics, ketamine
